How to properly brush your teeth with care

If you are using a manual toothbrush Follow the BASS technique⁵

1 Place the toothbrush head against the tooth at a 45-degree angle and brush gently using small circular motions.

2 Gently brush the outer tooth surfaces of 2-3 teeth, flicking the toothbrush to move away the plaque from the gumline. Brush also the inside of the teeth.

3 Tilt brush behind front teeth and brush.

4 Brush the top or biting teeth. Finally, gently but firmly brush the tongue in order to remove bacteria and spit out.

If you are using an electric toothbrush follow these steps⁵

1 Hold the brush so that the bristles are at a 45-degree angle to the gum margin.

2 Hold the brush head still on the tooth/gum margin for 3-5 seconds.

3 Slowly move from tooth to tooth in a rock-and-roll motion to get to grooves and crevices – you don't need to do conventional brushing movements.

4 Brush for 2 minutes – especially just before you go to bed.

Reminder

Visit the dentist every 2-3 months for a follow up.³

Reminder

Use electric toothbrushes with caution once a day.³
